

CASE STUDY

Floor Preparation - Blasting Facility

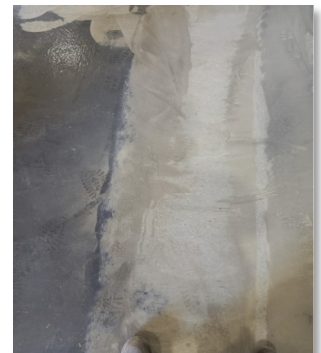

Grit Blasting UK was contracted to remove 420m² of coatings from a decommissioned Blasting Facility for the largest defence contractor in Europe.

During its life as a blasting facility, the floor had received multiple coatings in different areas specific to the working process in that part of the building. With a concentrated thickness up to 6-8mm in the paint Shop area for example.

Using the latest Planetary Diamond Floor Grinders, PCD (Polycrystalline Diamonds) tools, these were used to great effect in reducing and removing the coatings.

In combination with Diamond tools a suitably prepared clean dust free surface was produced ready to be handed over to the Resin Contractor—to apply a fresh even application over the surface.

Once completed, the building will be used as a new Storage Facility where Forklift trucks and other heavy equipment will be used.
