

CASE STUDY

Floor Preparation - College floor

This old floor covering hadn't quite lived up to the college's expectations, installed only a few years ago, this seamless installation of a PU floor was originally installed when the building was built.

The college's preferred flooring contractor DGK Flooring contacted Grit Blasting UK to discuss a removal process. After a site visit to ascertain the extent of works, a date and time frame was agreed. The school holidays are often one of the busiest times of year for any flooring contractor.

This particular removal process required the use of a ride-on stripping machine, weighing in at some 750kg, it has not only the weight but also the power to remove the most stubborn of materials. Once this process had been completed the area required a light grind to open up the surface ready for primers to be applied and the finished floor covering installed by DGK Flooring.
